VA-IMPACT trial (CSP#2002)

Investigation of Metformin in Pre-Diabetes on Atherosclerotic Cardiovascular Outcomes

88 million Americans have prediabetes. It is a mild elevation of blood sugar that can lead to diabetes. Pre-diabetes increases the risk of heart attack and stroke.

Metformin is a common drug approved by the Food and Drug Administration for diabetes. It is not approved for pre-diabetes.

The **VA-IMPACT** study will determine if metformin reduces the risk of heart attack, stroke, and related problems in patients with pre-diabetes.

You may be eligible to take part in this research study if:

- 1. Results from a recent blood test show mildly elevated sugar or hemoglobin A1c levels
-and-**
- 2. You have had previous signs of blood vessel problems in the circulation to your heart, brain, or legs**

Compensation: You will be compensated a minimum of \$20 for the Randomization Visit and when study-related lab tests are done. The compensation amount may increase over time depending on local factors.

If you would like to participate or would like more information about this research study, please contact:

Punit Goel, MD 520-792-1450 ext 16445
Amani Mikail 520-792-1450 ext 15519
Jordan Gonzalez 520-792-1450 ext 15059
